S.

S (ss), the nineteenth letter of the English alphabet, is a consonant, and is often called a sibilant, in allusion to its hissing sound. It has two principal sounds; one a mere hissing, as in *sack*, *this*; the other a vocal hissing (the same as that of *z*), as in *is*, *wise*. Besides these it sometimes has the sounds of *sh* and *zh*, as in *sure*, *measure*. It generally has its hissing sound at the beginning of words, but in the middle and at the end of words its sound is determined by usage. In a few words it is silent, as in *isle*, *débris*. With the letter *h* it forms the digraph *sh*. See *Guide to Pronunciation*, §§ 255-261.

Both the form and the name of the letter *S* are derived from the Latin, which got the letter through the Greek from the Phœnician. The ultimate origin is Egyptian. *S* is etymologically most nearly related to *c*, *z*, *t*, and *r*; as, in *ice*, *O.E. is*; *E. hence*, *O.E. hennet*; *E. rase*, *rase*; *erase*, *razor*; *that*, *G. das*; *E. reason*, *F. raison*, *L. ratio*; *E. was*, *were*; *chair*, *chaise* (see *C*, *Z*, *T*, and *R*).

2. The pledge or token of an oath or solemn covenant; a sacred thing; a mystery. [Obs.]

God sometimes sent a light of fire, and pillar of a cloud. . . and the sacrament of a rainbow, to guide his people through their portion of sorrows.

3. (Theol.) One of the solemn religious ordinances enjoined by Christ, the head of the Christian church, to be observed by his followers; hence, specifically, the eucharist; the Lord's Supper.

Syn. — SACRAMENT, EUCHARIST. — Protestants apply the term sacrament to baptism and the Lord's Supper, especially the latter. The Romish and Greek churches have five other sacraments, viz., confirmation, penance, holy orders, matrimony, and extreme unction. As sacrament denoted an oath or vow, the word has been applied by way of emphasis to the Lord's Supper, where the most sacred vows are renewed by the Christian in commemorating the death of his Redeemer. *Eucharist* denotes the giving of thanks; and this term also has been applied to the same ordinance, as expressing the grateful remembrance of Christ's sufferings and death. Some receive the sacrament as a means to procure great graces and blessings; others as an *eucharist* and an office of thanksgiving for what they have received.

Schooner (skôon'ér), *n.* [See the Note below. Cf. SHUN.] Originally, a small, sharp-built vessel, with two masts and fore-and-aft rig. Sometimes it carried square topsails on one or both masts and was called a *topsail schooner*. About 1840, longer vessels with three masts, fore-and-aft rigged, came into use, and since that time vessels with four masts and even with six masts, so rigged, are built. Schooners with more than two masts are designated *three-masted schooners*, *four-masted schooners*, etc. See *Illustration* in Appendix.

The first schooner ever constructed is said to have been built in Gloucester, Massachusetts, about the year 1713, by a Captain Andrew Robinson, and to have received its name from the following trivial circumstance: When the vessel went off the stocks into the water, a bystander cried out, "O, how the *schoon*!" Robinson replied, "A schooner let her be," and from that time, vessels thus masted and rigged have gone by this name. The word *schoon* is popularly used in some parts of New England to denote the act of making stones skip along the surface of water. The Scottish *skoon* means the same thing. Both words are pretty well allied to the Gaelic *skunda*, *skunda*, to make haste, hurry, *as skunda*, *as skunda*, *as skunda*, *as skunda*. According to the New England records, the word appears to have been originally written *scooner*. Babson, in his "History of Gloucester," gives the following extract from a letter written at that place on the 25th of Sept., 1721, by Dr. Moses Prince, brother of the Rev. Thomas Prince, the annalist of New England: "Went to see Captain Robinson's lady. This gentleman was first contriver of *schooners*, and built the first of that sort about eight years since."

Science (si'ens), *n.* [F., fr. L. *scientia*, fr. *sciens*, *-entis*, p. pr. of *scire* to know. Cf. CONSCIENCE, CONSCIOUS, NOISE.] 1. Knowledge; knowledge of principles and causes; ascertained truth or facts.

If we conceive God's sight or science, before the creation, to be extended to all and every part of the world, seeing everything as it is, . . . his science or sight from all eternity lays no necessity on anything to come to pass. *Hammond.*

Shakespeare's deep and accurate science in mental philosophy. *Coleridge.*

2. Accumulated and established knowledge, which has been systematized and formulated with reference to the discovery of general truths or the operation of general laws; knowledge classified and made available in work, life, or the search for truth; comprehensive, profound, or philosophical knowledge.

All this new science that men here [teach]. *Chaucer.*

Science is . . . a complement of cognition, having, in point of form, the character of logical perfection, and in point of matter, the character of real truth. *Sir W. Hamilton.*

3. Especially, such knowledge when it relates to the physical world and its phenomena, the nature, constitution, and forces of matter, the qualities and functions of living tissues, etc.; — called also *natural science*, and *physical science*.

Voltaire hardly left a single corner of the field entirely unexplored in science, poetry, history, philosophy. *J. Morley.*

4. Any branch or department of systematized knowledge considered as a distinct field of investigation or object of study; as, the *science* of astronomy, of chemistry, or of mind.

The sciences reckoned seven sciences, namely, grammar, rhetoric, logic, arithmetic, music, geometry, and astronomy; — the first three being included in the *Trivium*, the remaining four in the *Quadrivium*.

Good sense, which only is the gift of Heaven. And though no science, fairly worth the seven. *Pope.*

5. Art, skill, or expertise, regarded as the result of knowledge of laws and principles.

His science, coolness, and great strength. *G. A. Lawrence.*

Science is applied or pure. *Applied science* is a knowledge of facts, events, or phenomena, as explained, accounted for, or produced, by means of powers, causes, or laws. *Pure science* is the knowledge of these powers, causes, or laws, considered apart, or as pure from all applications. Both these terms have a similar and special significance when applied to the science of quantity; as, the *applied* and *pure mathematics*. *Exact science* is knowledge so systematized that prediction and verification, by measurement, experiment, observation, etc., are possible. The mathematical and physical sciences are called the *exact sciences*.

Comparative sciences, Inductive sciences. See under COMPARATIVE, and INDUCTIVE.

Syn. — Literature; art; knowledge. — *SCIENCE, LITERATURE, ART.* *Science* is literally *knowledge*, but more usually denotes a systematic and orderly arrangement of knowledge. In a more restricted sense, *science* embraces those branches of knowledge of which the subject-matter is either ultimate principles, or facts as explained by principles or laws thus arranged in natural order. The term *literature* sometimes denotes all compositions not embraced under *science*, but is usually confined to the *belles-lettres*. [See LITERATURE.] *Art* is that which depends on practice and skill in performance. "In *science*, *scimus ut sciamus*; in *art*, *scimus ut producamus*. And, therefore, *science* and *art* may be said to be investigations of truth; but one, *science*, inquires for the sake of knowledge; the other, *art*, for the sake of production; and hence *science* is more concerned with the higher truths, art with the lower; and *science* never is engaged, as art is, in productive application. And the most perfect state of *science*, therefore, will be the most high and accurate inquiry; the perfection of art will be the most apt and efficient system of rules; art always throwing itself into the form of rules."

Self, *n.* *pl.* *SELVES* (sēlvz). 1. It is also used reflexively; as, I abhor myself; thou enrichest thyself; he loves himself; she admires herself; it pleases itself; we value ourselves; ye hurry yourselves; they see themselves. Himself, herself, themselves, are used in the nominative case, as well as in the objective. "Jesus himself baptized not, but his disciples." *John* iv. 2.

Syn. — Selfishness. — **SELF-LOVE, SELFISHNESS.** The term self-love is used in a twofold sense: 1. It denotes that longing for good or for well-being which actuates the breasts of all, entering into and characterizing every species of desire. In this sense it has no moral quality, being, from the nature of the case, neither good nor evil.

2. It is applied to a voluntary regard for the gratification of special desires. In this sense it is morally good or bad according as these desires are conformed to duty or opposed to it. Selfishness is always voluntary and always wrong, being that regard to our own interests, gratification, etc., which is sought or indulged at the expense, and to the injury, of others. "So long as self-love does not degenerate into selfishness, it is quite compatible with true benevolence." *Selfishness.* "Not only is the phrase self-love used as synonymous with the desire of happiness, but it is often confounded with the word selfishness, which certainly, in strict propriety, denotes a very different disposition of mind." *Stewart.*

Sens'ation (sén-sà'shún), *n.* [Cf. F. *sensation*. See SENSATE.] 1. (Physiol.) An impression, or the consciousness of an impression, made upon the central nervous organ, through the medium of a sensory or afferent nerve or one of the organs of sense; a feeling, or state of consciousness, whether agreeable or disagreeable, produced either by an external object (stimulus), or by some change in the internal state of the body.

Perception is only a special kind of knowledge, and *sensation* a special kind of feeling. Knowledge and feeling, perception and *sensation*, though ways coexistent, are always in the inverse ratio of each other. Sir W. Hamilton.

2. A purely spiritual or psychical affection; agreeable or disagreeable feelings occasioned by objects that are not corporeal or material.

3. A state of excited interest or feeling, or that which causes it.

The *sensation* caused by the appearance of that work is still remembered by many. Brougham.

Syn. — Perception. — SENSATION, PERCEPTION. The distinction between these words, when used in mental philosophy, may be thus stated: If I simply smell a rose, I have a *sensation*; if I refer that smell to the external object which occasioned it, I have a *perception*. Thus, the former is mere feeling, without the idea of an object; the latter is the mind's apprehension of some external object as occasioning that feeling. *Sensation* properly expresses that change in the state of the mind which is produced by an impression upon an organ of sense of which change we can conceive the mind to be conscious, without any knowledge of external objects. *Perception*, on the other hand, expresses the knowledge or the intimations we obtain by means of our *sensations* concerning the qualities of matter, and consequently involves, in every instance, the notion of *externality*, or *outness*, which it is necessary to exclude in order to seize the precise import of the word *sensation*. Fleming.

2. The practice or methods of sensational writing or speaking; as, the *sensation-alism* of a novel.

Sens'ation-al-ist, *n.* 1. (Metaph.) An advocate of, or believer in, philosophical sensationalism.

2. One who practices sensational writing or speaking. **Sense** (sèns), *n.* [L. *sensus*, from *sensire*, *sensum*, to perceive, to feel, from the same root as *E. send*; cf. OHG. *sîn* sense, mind, *sinnan* to go, to journey, *G. sinnen* to meditate, to think: cf. F. *sens*. For the change of meaning cf. *SEE*, *v. t.* See SEND, and cf. ASSENT, CONSENT, SOKENT, *v. t.*, SENTENCE, SENTIENT.] 1. (Physiol.) A faculty, possessed by animals, of perceiving external objects by means of impressions made upon certain organs (sensory or sense organs) of the body, or of perceiving changes in the condition of the body; as, the *senses* of sight, smell, hearing, taste, and touch. See MUSCULAR SENSE, under MUSCULAR, and TEMPERATURE SENSE, under TEMPERATURE.

Hamilton: (a) "The complement of those conceptions or convictions which we receive from nature, which all men possess in common, and by which they test the truth of knowledge and the morality of actions." (b) "The faculty of first principles." These two are the philosophical significations.

(c) "Such ordinary complement of intelligence, that, if a person be deficient therein, he is accounted mad or foolish." (d) "What the *sense* of nature is emphasized: 'Native practical intelligence, natural prudence, mother wit, tact in behavior, acuteness in the observation of character, in contrast to habits of acquired learning or of speculation.' — Moral *sense*. See under MORAL, a. — The inner, or internal, *sense*, capacity of the mind to be aware of its own states; consciousness; reflection. This source of ideas every man has wholly in himself, and though it be not *sense*, as having nothing to do with external objects, yet it is very like it, and might properly enough be called *internal sense*. Locke. — *Sense capsule* (Anat.), one of the cartilaginous or bony cavities which inclose, more or less completely, the organs of smell, sight, and hearing. — *Sense organ* (Physiol.), a specially irritable mechanism by which the natural force or form of energy is enabled to excite sensory nerves; as the eye, ear, an end bulb or tactile corpuscle, etc. — *Sense organule* (Anat.), one of the modified epithelial cells in or near which the fibers of the sensory nerves terminate.

Syn. — Understanding; reason. — SENSE, UNDERSTANDING, REASON. Some philosophers have given a technical signification to these terms, which may here be stated. *Sense* is the mind's acting in the direct cognition either of material objects or of its own mental states. In the first case it is called the *outer*, in the second the *inner*, *sense*. *Understanding* is the logical faculty, i. e., the power of apprehending under general conceptions, or the power of classifying, arranging, and making deductions. *Reason* is the power of apprehending those first or fundamental truths or principles which are the conditions of all real and scientific knowledge, and which control the mind in all its processes of investigation and deduction. These distinctions are given, not as established, but simply because they often occur in writers of the present day.

Syn. — Thought; opinion; notion; sensibility; feeling. — **SENTIMENT**, **OPINION**, **FEELING**. An opinion is an intellectual judgment in respect to any and every kind of truth. *Feeling* describes those affections of pleasure and pain which spring from the exercise of our sentient and emotional powers. *Sentiment* (particularly in the plural) lies between them, denoting *settled opinions* or principles in regard to subjects which interest the feelings strongly, and are presented more or less constantly in practical life. Hence, it is more appropriate to speak of our religious *sentiments* than *opinions*, unless we mean to exclude all reference to our feelings. The word *sentiment*, in the singular, leans ordinarily more to the side of feeling, and denotes a refined sensibility on subjects affecting the heart. "On questions of feeling, taste, observation, or report, we define our *sentiments*." On questions of science, argument, or metaphysical abstraction, we define our *opinions*. The *sentiments* of the heart. *The opinions* of the mind. . . . There is more of instinct in *sentiment*, and more of definition in *opinion*. The admiration of a work of art which results from first impressions is classed with our *sentiments*; and, when we have accounted to ourselves for the approbation, it is classed with our *opinions*. *W. Syn. — **ROMANTIC**. — **SENTIMENTAL**, **ROMANTIC**. *Sentimental* usually describes an error or excess of the sensibilities; *romantic*, a vice of the imagination. The votary of the former gives indulgence to his sensibilities for the mere luxury of their excitement; the votary of the latter allows his imagination to rove for the pleasure of creating scenes of ideal enjoyment. "Perhaps there is less danger in works called *sentimental*. They attack the heart more successfully, because more cautiously." *V. Knox.* "I can not but look on an indifference of mind, as to the good or evil things of this life, as a mere *romantic* fancy of such who would be thought to be much wiser than they ever were, or could be." *Bp. 1. To owe; to be under obligation for. [*Obs.*] "By the faith I shall to God." *Court of Love*.

2. To be obliged; must. [*Obs.*] "Me athinketh [I am sorry] that I shall rehearse it her." *Chaucer*.

3. As an auxiliary, *shall* indicates a duty or necessity whose obligation is derived from the person speaking; as, you shall go; he shall go; that is, I order or promise your going. It thus ordinarily expresses, in the second and third persons, a command, a threat, or a promise. If the auxiliary be emphasized, the command is made more imperative, the promise or threat more positive and sure. It is also employed in the language of prophecy; as, "the day shall come when . . ." since a promise or threat and an authoritative prophecy nearly coincide in significance. In *shall* with the first person, the necessity of the action is sometimes implied as residing elsewhere than in the speaker; as, I shall suffer; we shall see; and there is always a less distinct and positive assertion of his volition than is indicated by *will*. "I shall go" implies nearly a simple futurity; more exactly, a foretelling or an expectation of my going, in which, naturally enough, a certain degree of plan or intention may be included; emphasize the *shall*, and the event is described as certain to occur, and the expression approximates in meaning to our emphatic "I will go." In a question, the relation of speaker and source of obligation is of course transferred to the person addressed; as, "Shall you go?" (answer, "I shall go"); "Shall he go?" i. e., "Do you require or promise his going?" (answer, "He shall go.") The

same relation is transferred to either second or third person in such phrases as "You say, or think, you shall go;" "He says, or thinks, he shall go." After a conditional conjunction (as *if*, *whether*) *shall* is used in all persons to express futurity simply; as, if I, you, or he shall say they are right. *Should* is everywhere used in the same connection and the same senses as *shall*, as its imperfect. It also expresses duty or moral obligation; as, he should do it whether he will or not. In the early English, and hence in our English Bible, *shall* is the auxiliary mainly used, in all the persons, to express simple futurity. (*Cf. WILL, v. t.*) *Shall* may be used elliptically; thus, with an adverb or other word expressive of motion *go* may be omitted. "He to England shall along with you." *Shak.*

Shall and *will* are often confounded by inaccurate speakers and writers. Say: I shall be glad to see you. Shall I do this? Shall I help you? (not Will I do this?) See *WILL*.

These names were originally the names of the constellations occupying severally the divisions of the zodiac, by which they are still retained; but, in consequence of the precession of the equinoxes, the signs have, in process of time, become separated about 30 degrees from these constellations, and each of the latter now lies in the sign next in advance, or to the east of the one which bears its name, as the constellation *Aries* in the sign *Taurus*, etc.

unequal length, by which a liquid can be transferred to a lower level, as from one vessel to another, over an intermediate elevation, by the action of the pressure of the atmosphere in forcing the liquid up the shorter branch of the pipe immersed in it, while the continued excess of weight of the liquid in the longer branch (when once filled) causes a continuous flow. The flow takes place only when the discharging extremity of the pipe is lower than the higher liquid surface, and when no part of the pipe is higher above the surface than the same liquid will rise by atmospheric pressure; that is, about 33 feet for water, and 30 inches for mercury, near the sea level.

The asteroids, between Mars and Jupiter, thus far discovered (1890), number about three hundred, the first four of which were found near the beginning of the century, and are called Ceres, Pallas, Juno, and Vesta. The principal elements of the major planets, and of the comets seen at more than one perihelion passage, are exhibited in the following tables:—

SOL This art was practiced by the Greeks; but six of the seven syllables now in use are generally attributed to Guido d' Arezzo, an Italian monk of the eleventh century, who is said to have taken them from the first syllables of the first six lines of the following stanza of a monkish hymn to St. John the Baptist: —

Ut queant laxis
Resonar fibris
Mira gestorum

Solve polluti
Labi reatum
Sancite Joannes.

Professor Skeat says the name of the seventh note, *si*, was also formed by him (Guido) from the initials of the two words of the last line; but this is disputed. Littré attributing the first use of it to Anselm of Flanders long afterwards. The syllable *do* is often substituted for *ut*.
